AI ENGINEER
Experience: 6 Years | Location: Gurugram | Type: Full-Time

EDUCATION

Bachelor's or Master's degree in Computer Science, Data Science, Statistics, Mathematics, or a related field.
Strong academic foundation in statistics, probability, and machine learning.

CORE EXPERIENCE

- 5-8 years of professional experience in Data Science, ML, or Applied AI
- Hands-on experience building, training, and deploying ML models in production
- Strong understanding of data preprocessing, feature engineering, model evaluation
- Experience working on end-to-end ML workflows
- Ability to translate business and product requirements into data-driven solutions

MACHINE LEARNING AND MLOPS

Practical experience using Amazon SageMaker for:
- Model training and tuning
- Model deployment and inference

Experience with common ML algorithms using scikit-learn, TensorFlow, or PyTorch

Familiarity with MLOps concepts such as:
- Model versioning
- Experiment tracking
- Basic monitoring and retraining workflows

Working knowledge of Docker and exposure to Kubernetes-based deployments
Experience collaborating with ML engineers to operationalize models

GENERATIVE AI AND LLMS

- Hands-on experience developing LLM-powered applications using Amazon Bedrock or similar platforms
- Experience building or contributing to RAG pipelines, including:
  - Document ingestion and chunking
  - Embedding generation
  - Similarity search using vector databases
- Practical knowledge of prompt engineering, prompt tuning, and output evaluation
- Understanding of LLM failure modes (hallucinations, grounding issues)
- Ability to evaluate LLM responses for accuracy, relevance, and safety

AGENTIC AI (GROWING EXPERTISE)

- Exposure to Agentic AI concepts and frameworks such as AgentCore
- Experience implementing:
  - Simple Autonomous agents or workflows
  - Multi-step reasoning with predefined tools
- Familiarity with tool-calling, agent orchestration, and workflow automation
- Understanding the importance of:
  - Guardrails

- Human-in-the-loop mechanisms
- Logging and observability for agent behavior

CLOUD PLATFORM

Working knowledge of key AWS services, including:
- S3, Lambda, Redshift, IAM

PROFESSIONAL AND COLLABORATION SKILLS

- Strong Python programming skills and experience working with APIs
- Ability to work effectively in cross-functional teams
- Willingness to learn quickly in a fast-evolving AI landscape
- Clear communication of findings and model behavior to non-technical stakeholders

NICE TO HAVE

- Exposure to AI governance, compliance, or ethical AI practices
- Experience with monitoring LLM outputs and evaluation frameworks
- Certifications in AWS, Machine Learning, or Data Science
- Prior experience in enterprise or cloud-native environments

REQUIRED SKILLS

- Artificial Intelligence / Machine Learning
- Agentic AI
